

**Module Description, available in: EN**

## *DevOps of cloud-native applications*

**General Information****Number of ECTS Credits**

3

**Module code**

TSM\_DevOps

**Valid for academic year**

2020-21

**Last modification**

2019-10-30

**Coordinator of the module**

Tiziano Leidi (SUPSI, tiziano.leidi@supsi.ch)

**Explanations regarding the language definitions for each location:**

- Instruction is given in the language defined below for each location/each time the module is held.
- Documentation is available in the languages defined below. Where documents are in several languages, the percentage distribution is shown (100% = all the documentation).
- The examination is available 100% in the languages shown for each location/each time it is held.

	Lausanne			Lugano	Zurich		
<b>Instruction</b>				X E 100%			
<b>Documentation</b>				X E 100%			
<b>Examination</b>				X E 100%			

**Module Category**

TSM Technical scientific module

**Lessons**

2 lecture periods and 1 tutorial period per week

**Entry level competences****Prerequisites, previous knowledge**

Programming skills in Java

Ground software engineering skills (in particular design pattern, concurrent programming and application development for the web)

**Brief course description of module objectives and content**

This course focus on software technologies, architectures, and methodologies for development of cloud-native applications.

## Aims, content, methods

### Learning objectives and acquired competencies

This course provides detailed skills on contemporary software solutions that allow developing cloud-native applications. The course will introduce and deepen the recent evolution of technologies, architectures and methodologies for microservice-based systems, by taking advantage of a DevOps approach.

The course goal is the consolidation of required advanced technical skills for modern software development in the cloud, with particular care on the role played by the recent innovations.

The course will be proposed as a combination of lectures and exercises, including practical demonstrations and laboratory development. Readings will be assigned to students as complementary deepening material.

### Contents of module with emphasis on teaching content

The student will be provided knowledge about modern development methodologies, frameworks and tools, including:

- Introduction to cloud computing technologies (IaaS, PaaS, SaaS and other fundamentals)
- Tools and methodologies for DevOps and CI/CD
- Container technologies (Docker)
- Infrastructures for container orchestration (Kubernetes)
- Frameworks for REST APIs development (Spring Boot)
- Software architectures and design patterns for microservices
- Protocols and technologies for message queuing (AMQP) and for inter-process communication (gRPC)
- Serverless computing technologies (FaaS and lambdas)
- GraphQL (with Spring Boot)
- Techniques for infrastructure as a code (Terraform)
- Service mesh technologies (Istio, Linkerd)
- Tools and frameworks for monitoring and logging (Prometheus, Fluentd)
- Storage orchestrators for kubernetes (Etcd, Rook)
- Tools and frameworks for testing: unit, integration, component, contract, end-to-end

### Teaching and learning methods

Frontal theoretical lessons, demonstrations, examples, exercises

### Literature

## Assessment

### Certification requirements

Module does not use certification requirements

### Basic principle for exams

**As a rule, all the standard final exams for modules and also all resit exams are to be in written form**

### Standard final exam for a module and written resit exam

Kind of exam

written

Duration of exam

120 minutes

Permissible aids

No aids permitted

### Special case: Resit exam as oral exam

Kind of exam

oral

Duration of exam

30 minutes

Permissible aids
