

**Module Description, available in: EN**

## *Digitalisation in industry*

**General Information****Number of ECTS Credits**

3

**Module code**

TSM\_DigInd

**Valid for academic year**

2020-21

**Last modification**

2019-08-31

**Coordinator of the module**

Felix Nyffenegger (OST, felix.nyffenegger@ost.ch)

**Explanations regarding the language definitions for each location:**

- Instruction is given in the language defined below for each location/each time the module is held.
- Documentation is available in the languages defined below. Where documents are in several languages, the percentage distribution is shown (100% = all the documentation).
- The examination is available 100% in the languages shown for each location/each time it is held.

	Lausanne			Lugano	Zurich		
<b>Instruction</b>					X E 100%		
<b>Documentation</b>					X E 100%		
<b>Examination</b>					X E 100%		

**Module Category**

TSM Technical scientific module

**Lessons**

2 lecture periods and 1 tutorial period per week

**Entry level competences****Prerequisites, previous knowledge**

None.

**Brief course description of module objectives and content**

This module offers an overview of digitization in industry from several perspectives.

**Content****Section 1: Product Lifecycle Management**

- Introduction of end-to-end process (As-Required, As-Design, As-Built, As Maintained)
- Product lifecycle and closed loop lifecycle management

- Development of mechatronic products (HW/SW Co-Development)
- Generating master data for mechatronic products
- Customizable products and modularization
- Engineering Change management

## Section 2: Digitization in Production

- Introduction to Production Management
- Prozessleitsysteme, Bussysteme und Protokolle, MES
- Optimization of production based on digital tools
- Examples and Use Cases of digitization in production
- Lean Management and digitization

## Section 3: Digitalization of Products

- Digitization driven new Business Models
- Sensor to information: communication and aggregation of data
- Reliability, security and accessibility
- Digital Twins
- Discussion of specific Use Cases - Market & Operational Excellence

## Aims, content, methods

### Learning objectives and competencies to be acquired

- The students obtain an overview of the processes, data structures and information flows based on different product strategies inside a company.
- They are qualified to evaluate different approaches to organize a company regarding the product strategy, product architecture, the production processes and the deployed IT solutions. Relying on this, they are able to identify and apply optimization strategies.
- They are familiar with state-of-the-art concepts of digitization in order to classify efficiency and transparency in production processes (industry 4.0).
- They are familiar with the basic concepts of digitized products (Internet of Things) and how these are linked to the processes and data streams of the original company in order to increase the range of product related services or business models.
- They can rationally decide between "digital" and "non-digital" solution concepts.

### Module content with weighting of different components

### Teaching and learning methods

### Literature

## Assessment

### Certification requirements

Module does not use certification requirements

### Basic principle for exams

**As a rule, all standard final exams are conducted in written form. For resit exams, lecturers will communicate the exam format (written/oral) together with the exam schedule.**

### Standard final exam for a module and written resit exam

#### Kind of exam

Written exam

#### Duration of exam

120 minutes

#### Permissible aids

No aids permitted

**Special case: Resit exam as oral exam**

**Kind of exam**

Oral exam

**Duration of exam**

30 minutes

**Permissible aids**

No aids permitted
