

**Module Description, available in: EN**

## *Optical engineering and metrology*

**General Information****Number of ECTS Credits**

3

**Module code**

TSM\_OpEngMe

**Valid for academic year**

2020-21

**Last modification**

2019-11-07

**Coordinator of the module**

Bojan Resan (FHNW, bojan.resan@fhnw.ch)

**Explanations regarding the language definitions for each location:**

- Instruction is given in the language defined below for each location/each time the module is held.
- Documentation is available in the languages defined below. Where documents are in several languages, the percentage distribution is shown (100% = all the documentation).
- The examination is available 100% in the languages shown for each location/each time it is held.

	Lausanne			Lugano	Zurich		
<b>Instruction</b>					X E 100%		
<b>Documentation</b>					X E 100%		
<b>Examination</b>					X E 100%		

**Module Category**

TSM Technical scientific module

**Lessons**

2 lecture periods and 1 tutorial period per week

**Entry level competences****Prerequisites, previous knowledge**

Optics: Basics of wave and geometrical optics;

Without optics basics during bachelor studies, the EVA "Fundamentals of light" should be visited before visiting further TSM modules.

Physics: Basics for engineers (bachelor niveau)

**Brief course description of module objectives and content**

The TSM module "Optical engineering and metrology" will provide the students with knowledge of numerous engineering and practical aspects of optical components, instruments, and metrology systems. Starting from seemingly simple optical components (mirrors, lenses, gratings, filters), the module covers high tech novelties on how to improve those components and bring them to the new level. Building up on those concepts, we will

discuss more complex components, including acousto-optic, electro-optic, and liquid crystal modulators, as well as simpler systems like objectives and spectrometers. The module will be completed with methods applied in industry for measuring and diagnostics of various processes, including industrial interferometry, spectroscopy, imaging, and precise distance measurements.

## Aims, content, methods

### Learning objectives and competencies to be acquired

After successfully completing this module, the students should:

- understand the principles and know engineering aspects of basic optical components,
- be able to choose the appropriate optical element (including appropriate coating) for their tasks,
- know the principles of optical instruments and understand how some simple optical instruments operate,
- understand some optical metrology and microscopy methods, typically used in industry,
- be able to choose the appropriate optical diagnostics method for their process.

### Module content with weighting of different components

#### 1) Optical components (total 5 weeks):

- types of mirrors and lenses, incl. different coatings (1 week);
- principles of operation and types of polarization optics (waveplates, polarizer, isolator) (1 week);
- types, characteristics and applications of optical filters: absorption, interference, neutral density, reflective, long-pass, band-pass, notch, spatial, (1 week);
- gratings (1 week);
- light modulators (chopper, LCD, AOM, EOM) (1 week);

#### 2) Optical instruments (total 3 weeks):

- Imaging optics (MTF, aberrations, camera objectives...) (1 week);
- Spectrometers (1 week);
- Colorimetry, color spaces and laser projection and displays (1 week);

#### 3) Optical metrology (total 6 weeks):

- Industrial inspection: interferometry, industrial vision, Moire technique, laser triangulation (1.5 week);
- Spectroscopy: linear absorption, FTIR, luminescence, Raman (1 week);
- Hyperspectral imaging (1 week);
- Microscopy: confocal, two-photon, super-resolution STED, OCT (1.5 week);
- Laser detection: LIDAR, 3D sensing and self-driven cars (1 week);

### Teaching and learning methods

Lectures, open discussion with students, self-study, and practical home work.

### Literature

- 1) Lecturers' scripts with references to current literature,
- 2) Saleh, Tech: Fundamentals of optics
- 3) Hecht: Optics

## Assessment

### Certification requirements

Module does not use certification requirements

### Basic principle for exams

**As a rule, all standard final exams are conducted in written form. For resit exams, lecturers will communicate the exam format (written/oral) together with the exam schedule.**

### Standard final exam for a module and written resit exam

#### Kind of exam

Written exam

#### Duration of exam

120 minutes

#### Permissible aids

*Aids permitted as specified below:*

**Permissible electronic aids**

No electronic aids permitted

**Other permissible aids**

Personal formula collection: 4 A4 pages allowed.

**Special case: Resit exam as oral exam**

**Kind of exam**

Oral exam

**Duration of exam**

30 minutes

**Permissible aids**

No aids permitted
