

Module Description, available in: EN

Modelling for aviation infrastructure and future mobility

General Information**Number of ECTS Credits**

3

Module code

TSM_ModAvi

Valid for academic year

2024-25

Last modification

2021-01-12

Coordinator of the module

Manuel Renold (ZHAW, manuel.renold@zhaw.ch)

Explanations regarding the language definitions for each location:

- Instruction is given in the language defined below for each location/each time the module is held.
- Documentation is available in the languages defined below. Where documents are in several languages, the percentage distribution is shown (100% = all the documentation).
- The examination is available 100% in the languages shown for each location/each time it is held.

	Winterthur			
Instruction	X E 100%			
Documentation	X E 100%			
Examination	X E 100%			

Module Category

TSM Technical scientific module

Lessons

2 lecture periods and 1 tutorial period per week

Entry level competences**Prerequisites, previous knowledge**

The students are expected to have knowledge on a basic level in:

- Descriptive statistic (but not a requirement)
- Aviation in general (but not a requirement)

Brief course description of module objectives and content

The course will focus on operational and infrastructure topics and the optimization of complex systems in terms of delay, capacity issues and future developments in aviation.

Future developments and important upcoming topics in the airline industry will be addressed, such as unmanned aircraft systems, new approaches in business models or passenger operations.

Aims, content, methods

Learning objectives and acquired competencies

The students will be able to understand state-of-the-art methods for operations in aviation in general but also new methods e.g. machine learning, deep learning and different approaches in meta-heuristic optimization.

Obtain the ability of modelling and simulation of resources (crews, fleets, passengers) for network planning, data processing and capacity issues.

Improving the presentation competencies to report complex modelling results to the decision makers. Achieving the ability to apply "what has been learnt" to future developments.

The students will learn how to design and plan infrastructures and operation in terms of capacity, delay management, and revenue managements.

Students will be able to assess future developments in the airline industry, classify them and react appropriately.

Contents of module with emphasis on teaching content

The course starts with a brief introduction in the infrastructural set-up of aviation systems in terms of capacity, demand and operational issues.

Basic concept in operation management will be briefly repeated, which then are used to deepening the knowledge for important topics such as capacity planning, airline transport management, airline revenue management, and overall mathematical optimization methods.

The last part of the course will be dedicated to the future development in the airline industry with a focus on operational methods, upcoming transport techniques and new infrastructure approaches.

Teaching and learning methods

- Lectures
- Self-study
- Run simulations under supervision and in small self-study projects
- Work on weekly exercises (sometimes with oral presentations in front of the class)
- Analysis of case studies
- Scientific paper studies and online research

- Air Transportation A Management Perspective, John G. Wensween, Verlag Routledge

Assessment

Certification requirements

Module does not use certification requirements

Basic principle for exams

As a rule, all the standard final exams for modules and also all resit exams are to be in written form

Standard final exam for a module and written resit exam

Kind of exam

written

Duration of exam

120 minutes

Permissible aids

Aids permitted as specified below:

Permissible electronic aids

Calculator (not programmable)

Other permissible aids

Written summary of 5 pages (A4 size, hand written, double sided)

Special case: Resit exam as oral exam

Kind of exam

oral

Duration of exam

30 minutes

Permissible aids

Aids permitted as specified below:

Permissible electronic aids

Calculator (not programmable)

Other permissible aids

Written summary of 5 pages (A4 size, hand written, double sided)
