

**Module Description, available in: EN**

## *Environmental Technologies: Wastewater Treatment*

**General Information**

## Number of ECTS Credits

3

## Module code

TSM\_WWTreat

## Valid for academic year

2025-26

## Last modification

2024-10-06

## Coordinator of the module

Roger König (SUPSI, roger.koenig@supsi.ch)

## Explanations regarding the language definitions for each location:

- Instruction is given in the language defined below for each location/each time the module is held.
- Documentation is available in the languages defined below. Where documents are in several languages, the percentage distribution is shown (100% = all the documentation).
- The examination is available 100% in the languages shown for each location/each time it is held.

	Lausanne			Lugano	Zurich		
<b>Instruction</b>					X E 100%		
<b>Documentation</b>					X E 100%		
<b>Examination</b>					X E 100%		

## Module Category

TSM Technical scientific module

## Lessons

2 lecture periods and 1 tutorial period per week

**Entry level competences**

## Prerequisites, previous knowledge

Basics in chemistry and physics

**Brief course description of module objectives and content**

The student learns the mechanical, chemical and biological processes used for environmental engineering (wastewater treatment). The course covers chemical, physical and biological treatment technologies. Furthermore, the topic of water reuse (greywater) and nutrient recovery is lectured.

## Aims, content, methods

### Learning objectives and competencies to be acquired

Knowing the classical areas of environmental technology, namely the sustainable treatment of

- Wastewater and
- reuse and nutrient recovery from wastewater

Wastewater:

- Know different applied wastewater treatment technologies and be able to identify their pros and cons.;
- Insides of technological aspects of the different technologies;
- Knowledge acquisition on the adequate technology for different wastewater compositions;

Reuse and nutrient recycling

- Know the importance of nutrient recovery;
- Know the available technologies for nutrient recovery in wastewater treatment;
- Acquire know-how on water reuse and application with case studies

### Module content with weighting of different components

- Introduction: (1/3)
  - Overview water management Switzerland/Global
  - Wastewater treatment essentials (WWTP visit)
  - Fundamentals of chemical, physical and biological wastewater treatment
- Water treatment (municipal and industrial) technologies (2/3)
  - Physical and chemical wastewater treatment technologies
  - Biological Nutrient Removal technologies
  - Technologies for the elimination of emerging contaminants (Micropollutants)
- Water recycling and nutrient recovery (3/3)
  - Water reuse (Greywater reuse, Drinking water)
  - Nutrient recovery (P, N)

### Teaching and learning methods

Front lecturing (theory) with open discussion and classworks

### Literature

- Slides given at the course from the Lecturer;
- Tchobanoglous et al. (2003) Wastewater Engineering Treatment and Reuse, Metcalf & Eddy, McGraw Hill, 4th Edition.
- Stuez Richard (2009) Principles of Water and Wastewater Treatment Processes, IWA Publishing
- Jud Simon (2009) Process Science and Engineering for Water and Wastewater Treatment, IWA Publishing

## Assessment

### Additional performance assessment during the semester

The module contains additional performance assessment(s) during the semester. The achieved mark of the additional performance assessment(s) applies to both the regular and the resit exam.

### Description of additional performance assessment during the semester

Throughout the semester, students will collaborate on designing a wastewater treatment plant. This project will culminate in a report, which contributes 20% to the final grade.

The evaluation will be based on three key criteria:

1. The quality of the final design and results.
2. The approach and process followed to achieve these results.
3. The effectiveness of teamwork and collaboration.

### Basic principle for exams

**As a rule, all standard final exams are conducted in written form. For resit exams, lecturers will communicate the exam format (written/oral) together with the exam schedule.**

### Standard final exam for a module and written resit exam

Kind of exam

Written exam

Duration of exam

120 minutes

Permissible aids

No aids permitted

**Exception: In case of an electronic Moodle exam, adjustments to the permissible aids may occur. Lecturers will announce the final permissible aids prior to the exam session.**

### Special case: Resit exam as oral exam

Kind of exam

Oral exam

Duration of exam

30 minutes

Permissible aids

No aids permitted
