

**Module Description, available in: EN**

## ***Autonomous mobile robot systems***

**General Information**

Number of ECTS Credits

3

Module code

TSM\_AutMobRoS

Valid for academic year

2026-27

Last modification

2021-12-01

Coordinator of the module

Björn Jensen (HSLU, bjoern.jensen@hslu.ch)

**Explanations regarding the language definitions for each location:**

- Instruction is given in the language specified for each location and module execution.
- Documentation is available in the language(s) listed for each location and module execution. If the documentation is in multiple languages, the percentage distributed is indicated (100% = all documentation provided).
- The examination, including both questions and answers, is provided entirely (100%) in the language(s) specified for each location and module execution. The exams are on-site.

	Lausanne			Lugano	Zurich	
<b>Instruction</b>				X E 100%		
<b>Documentation</b>				X E 100%		
<b>Examination</b>				X E 100%		

**Module Category**

TSM Technical scientific module

**Lessons**

2 lecture periods and 1 tutorial period per week

**Entry level competences**

Prerequisites, previous knowledge

- Linear algebra
- General affinity to mathematics
- Basic feedback control systems
- Basic programming skills

## Brief course description of module objectives and content

Mobile robots are complex mechatronic systems often interacting autonomously with their environment.

In the first part, the course provides theoretical fundamentals of mobile robot sensor fusion, planning, localization and mapping with examples in ROS. Tests of these complex systems can be conducted in simulated environments to speed up development and minimize risk of damage. Data from live tests can be recorded for later reuse and analysis as a foundation for further development.

In the second part of the course, students learn how to develop robot software and put it into practice using a practical example on a training robot. This includes real-time control, path planning, odometry, observers, position estimation, path control, etc. In the development process, we use the same development environments and libraries as in our industrial research projects.

## Aims, content, methods

### Learning objectives and competencies to be acquired

This course aims at giving students a deep insight into and theoretical understanding of the inner workings of autonomous mobile systems reinforced by hands-on experience of mobile robots or simulations thereof. At the end of this course students will be able to build mobile robots with autonomous behaviour.

### Module content with weighting of different components

- \* Mathematical foundations (short primer)
- + Coordinate transformations, quaternions
- \* Mobile robot platforms in different environments: air, land, sea
  - + Wheeled robots, drones, submarines,
  - + Kinematics
  - + Typical sensors
  - + Control
  - + Real-time systems
- \* Localization
  - + Odometry
  - + GPS
  - + Sensor fusion
- \* Mapping
  - + SLAM & Loop-Closing
- \* Navigation
  - + Planning
  - + Obstacle avoidance
  - + Trajectory follower
- \* Advanced Topics
  - + Real-time systems & Robot operating system frameworks
  - + Modelling & simplification (Simulation & Design)
  - + Dynamics of mobile robot platforms.

## Teaching and learning methods

Ex-cathedra teaching

Case studies

The theory learned in class is applied in exercises

## Literature

Siegwart, R. et al. "Introduction to Autonomous Mobile Robots", 2011, 2nd edition, MIT Press.

ISBN 978-0262015356

## Assessment

### Additional performance assessment during the semester

The module does not contain an additional performance assessment during the semester

### Basic principle for exams

**As a rule, all standard final exams are conducted in written form. For resit exams, lecturers will communicate the exam format (written/oral) together with the exam schedule.**

### Standard final exam for a module and written resit exam

Kind of exam

Written exam

Duration of exam

120 minutes

Permissible aids

No aids permitted

**Exception: In case of an electronic Moodle exam, adjustments to the permissible aids may occur. Lecturers will announce the final permissible aids prior to the exam session.**

### Special case: Resit exam as oral exam

Kind of exam

Oral exam

Duration of exam

30 minutes

Permissible aids

No aids permitted
