

**Module Description, available in: EN**

## Data Management

### General Information

**Number of ECTS Credits**

3

**Module code**

TSM\_DataMgmt

**Valid for academic year**

2026-27

**Last modification**

2025-10-18

**Coordinator of the module**

Stefan Keller (OST, stefan.keller@ost.ch)

**Explanations regarding the language definitions for each location:**

- Instruction is given in the language specified for each location and module execution.
- Documentation is available in the language(s) listed for each location and module execution. If the documentation is in multiple languages, the percentage distributed is indicated (100% = all documentation provided).
- The examination, including both questions and answers, is provided entirely (100%) in the language(s) specified for each location and module execution. The exams are on-site.

	Lausanne	Lugano	Zurich
<b>Instruction</b>	X E 100%		X E 100%
<b>Documentation</b>	X E 100%		X E 100%
<b>Examination</b>	X E 100%		X E 100%

**Module Category**

TSM Technical scientific module

**Lessons**

2 lecture periods and 1 tutorial period per week

### Entry level competences

**Prerequisites, previous knowledge**

- UML Class Diagrams
- Relational Models, Relational Algebra, Normalization
- Relational Database Management Systems (RDBMS) e.g. Codd's 12 rules, ACID, architecture, etc.
- SQL:92 (i.e. INSERT, UPDATE, DELETE and queries with SELECT-FROM-AS-JOIN-WHERE-GROUP BY)
- Query Optimization, Indexes
- Transaction Processing, Concurrency Control
- Security in (Relational) Database Systems
- Knowledge of an operating system including shell

## Brief course description of module objectives and content

This course is about Data Engineering and Information Retrieval. It covers methods and technologies for managing, processing and analyzing potentially large and distributed data collections for transactional or analytical use, including multi-model databases and NoSQL stores. And it covers also mastering data in unstructured form (full text search). The course consists of four parts: 1. Database Management; 2. Data Warehousing and Data Analytics (Business Intelligence); 3. Data Integration including Data Synthesis; and 4. Information Retrieval.

## Aims, content, methods

### Learning objectives and competencies to be acquired

This module covers following important aspects of Data Engineering:

- Students understand the use of modern database technologies for processing and managing potentially large and distributed data collections for transactional or analytical use.
- Students will be proficient in modern query languages such as the post-relational SQL (SQL:2023 and newer).
- Reaching beyond RDBMS, students learn about data structures (data types) and know which of these to use depending on the requirements and type of data available (polyglot persistence, multi-model databases).
- Students know NoSQL stores and selected cloud data stores and understand both the theoretical aspects, as well as some NoSQL modelling techniques.
- Students know methods and tools to integrate, to cleanse and to synthesize data.
- Students understand data warehouses and data lakehouses (features, architectures, modeling, managing volumes of data).
- Students know how to deal with full text information using databases and search engines (information retrieval; prompt engineering).
- Students can also apply the acquired knowledge in their own working environment.

### Module content with weighting of different components

The course is divided into four parts:

1. Database Management (DB): New data structures (types) and alternatives to RDBMS. Storing data with post- and non-relational aspects, including NoSQL technologies (especially graph databases), and a selection of advanced topics such as cloud or vector databases.
2. Data Warehousing and Data Analytics (DW): Methods and tools for data aggregation and data analytics such as the ones involved in business intelligence.
3. Data Integration (DI): Methods and tools for data integration, data cleansing and data synthesizing (e.g. for training and testing) are explained.
4. Information Retrieval (IR): Methods and tools for finding information in full text using databases and (enterprise) search engines, including crawling.

Weighting between the parts will be confirmed at the beginning of semester. Tentative weighting:

1. DB: ~4-6 weeks
2. DW: ~2-4 weeks
3. DI: ~1-3 weeks
4. IR: ~3-5 weeks

### Teaching and learning methods

Frontal teaching, case studies, exercises, discussions, (group) work assignments (i.e. laboratory work or mini-project).

### Literature

Optional literature suggestions (books):

- DB: Advanced Data Management for SQL, NoSQL, Cloud and Distributed Databases. R. Wiese. De Gruyter Textbook. 2015. ISBN 978-3-11-044140-6.
- DB: SQL for Data Scientists: A Beginner's Guide for Building Datasets for Analysis. R. Teate. Wiley. 2021. ISBN 978-1-119-66936-4.
- IR: Introduction to Information Retrieval. C.D. Manning, P. Raghavan, H. Schütze. Cambridge UP, 2008.
- IR: Information Retrieval in Practice. B. Croft, D. Metzler, T. Strohman. Pearson Education, 2009.

## Assessment

### Additional performance assessment during the semester

The module contains additional performance assessment(s) during the semester. The achieved mark of the additional performance assessment(s) applies to both the regular and the resit exam.

### Description of additional performance assessment during the semester

This module includes a performance assessment during the semester which counts for 25% of the final grade for the module.

### Basic principle for exams

**As a rule, all standard final exams are conducted in written form. For resit exams, lecturers will communicate the exam format (written/oral) together with the exam schedule.**

#### Standard final exam for a module and written resit exam

Kind of exam

Written exam

Duration of exam

120 minutes

Permissible aids

*Aids permitted as specified below:*

**Permissible electronic aids**

Scientific calculator (without active communication functions).

**Other permissible aids**

Summary on one A4 page (possibly written on both sides).

**Exception: In case of an electronic Moodle exam, adjustments to the permissible aids may occur. Lecturers will announce the final permissible aids prior to the exam session.**

#### Special case: Resit exam as oral exam

Kind of exam

Oral exam

Duration of exam

30 minutes

Permissible aids

No aids permitted
