

**Module Description, available in: EN***Engineering of safety critical systems***General Information****Number of ECTS Credits**

3

**Module code**

TSM\_SafeSys

**Valid for academic year**

2026-27

**Last modification**

2019-08-31

**Coordinator of the module**

Pierluigi Capone (ZHAW, capo@zhaw.ch)

**Explanations regarding the language definitions for each location:**

- Instruction is given in the language specified for each location and module execution.
- Documentation is available in the language(s) listed for each location and module execution. If the documentation is in multiple languages, the percentage distributed is indicated (100% = all documentation provided).
- The examination, including both questions and answers, is provided entirely (100%) in the language(s) specified for each location and module execution. The exams are on-site.

	Winterthur			
<b>Instruction</b>	X E 100%			
<b>Documentation</b>	X E 100%			
<b>Examination</b>	X E 100%			

**Module Category**

TSM Technical scientific module

**Lessons**

2 lecture periods and 1 tutorial period per week

**Entry level competences****Prerequisites, previous knowledge**The students are expected to have basic knowledge of aircraft engineering such as:

- Aerodynamics
- Aircraft Structures
- Understanding of Aircraft Systems
- Understanding of Aircraft Propulsion
- Basic concepts of Maintenance
- Safety:
  - System Safety
  - Safety Process

## Brief course description of module objectives and content

Safety-critical systems are those systems whose failure could result in loss of life. An aircraft such as an airliner has more than one safety critical systems.

The engineering activities required to design and manage these complex systems over their life cycles require a deep understanding of several disciplines and a systematic approach to problems such as:

- Requirements engineering
- Requirement based testing
- Validation and verification of complex function
- Managing human factors and teams

In this module the students will have an overview of Safety Critical Systems and related engineering activities and how these activities must be planned and executed in order to lead to successful certification and continued airworthiness.

## Aims, content, methods

### Learning objectives and competencies to be acquired

Understand core engineering and human-centered disciplines necessary to successful design, development and continued airworthiness of Safety Critical Systems (SCS).

The student are expected to acquire the following competencies:

- Understanding of safety critical system
- Be able to apply system engineering principles
- Understanding of system components qualification
- Understanding of aircraft certification process
- Logic of human behaviour

### Module content with weighting of different components

Syllabus:

1. Introduction to Safety Critical Systems (SCS): General Concepts, Examples of SCS
2. Review of System Engineering Principles
3. Requirements: Writing, Verification and Validation, Testing
4. Safety Process: SAE-ARP-4761
5. Development Assurance Level: SAE-ARP-4754A
6. Unmanned Aircraft: Concept of Operations, Holistic Approach/SORA, Integration with Manned Aviation
7. Robustness, Redundancy, Dissimilarity and Integrity
8. Modeling and Simulation: Introduction
9. Modeling and Simulation of SCS
10. Testing of SCS
11. Human Reliability
12. Personality Motivation / Interpersonal Skills
13. Stress & Resilience
14. Safety Culture & Team Performance

### Teaching and learning methods

- All lectures are strictly connected to current aviation practice and, where feasible, practical examples will be provided
- Real world examples with lessons learned will be provided for self study

### Literature

- SAE-ARP-4754B - *Guidelines For Development Of Civil Aircraft and Systems*
- *Aircraft Design - A Systems Engineering Approach* M. H. Sadraey, Wiley Aerospace Engineering
- SAE-ARP4761A - *Guidelines And Methods For Conducting The Safety Assessment Process On Civil Airborne Systems And Equipment*
- DO-178C, *Software Considerations in Airborne Systems and Equipment Certification*

## Assessment

### Additional performance assessment during the semester

The module does not contain an additional performance assessment during the semester

### Basic principle for exams

**As a rule, all standard final exams are conducted in written form. For resit exams, lecturers will communicate the exam format (written/oral) together with the exam schedule.**

### Standard final exam for a module and written resit exam

#### Kind of exam

Written exam

#### Duration of exam

120 minutes

#### Permissible aids

*Aids permitted as specified below:*

#### Permissible electronic aids

- A non programmable calculator

#### Other permissible aids

- Closed Book
- Formulary will be distributed

**Exception: In case of an electronic Moodle exam, adjustments to the permissible aids may occur. Lecturers will announce the final permissible aids prior to the exam session.**

### Special case: Resit exam as oral exam

#### Kind of exam

Oral exam

#### Duration of exam

30 minutes

#### Permissible aids

No aids permitted
