

Module Description, available in: EN

Engineering of Industrial Robots

General Information

Number of ECTS Credits

3

Module code

TSM_IndRobot

Valid for academic year

2024-25

Last modification

2023-09-12

Coordinator of the module

Anna Valente (SUPSI, anna.valente@supsi.ch)

Explanations regarding the language definitions for each location:

- Instruction is given in the language defined below for each location/each time the module is held.
- Documentation is available in the languages defined below. Where documents are in several languages, the percentage distribution is shown (100% = all the documentation).
- The examination is available 100% in the languages shown for each location/each time it is held.

	Lausanne			Lugano	Zurich		
Instruction				X E 100%			
Documentation				X E 100%			
Examination				X E 100%			

Module Category

TSM Technical scientific module

Lessons

2 lecture periods and 1 tutorial period per week

Entry level competences

Prerequisites, previous knowledge

- Linear algebra
- Basics of mechanics (statics and kinematics)
- Mechanical design (recommended)
- Basic programming skills
- Basics of robotics (recommended)

Brief course description of module objectives and content

The course targets technical and application challenges related to the design of advanced robotic solutions for industrial and service applications. It addresses the design, engineering and optimization of serial and parallel kinematics robotic arms, as well as of mobile platforms.

The course will cover theoretical content and practical activities of mechanical design, programming and simulation, as well as laboratory experiences with real hardware

Industrial use cases and service use cases will be addressed during the application/laboratory activities, specifically dealing with cutting-edge solutions and challenging markets demanding advanced robotic platform.

The laboratory activities will involve the use of industrial robots, cobots, and both commercial and experimental mobile platforms (wheeled and legged), to demonstrate course topics and to support the students in developing their projects and testing some of the designed hardware solutions.

Aims, content, methods

Learning objectives and competencies to be acquired

The learning objectives are:

- Ability to select a robotic platform starting from specific use cases requirements as well as productivity and safety KPIs
- Design, engineer, analyze statically and dynamically a robotic solution
- Design accessories (tools, fixturing, sensors), including vision-based perception systems

Module content with weighting of different components

Robotics basics review

- Position and orientation
- Kinematics
- Dynamics
- Trajectory and motion planning

Engineering of arm-type robots

- Problem statement: reference industrial task
- Serial and parallel robot architectures
- Workcell configuration: kinematic model, reach, tools, sensors
- Structural design, computation of inertias
- Design and dimensioning of actuators and transmission mechanisms
- Tool, fixturing, services design
- Motion simulation and optimization
- Design of vision-based sensing solutions

Engineering of mobile robots

- Problem statement: reference industrial task
- Kinematic models for wheeled robots
- Kinematic models for legged robots
- Robot configuration: kinematic model, tools, sensors
- Locomotion system design
- Path planning and motion simulation
- Design of vision-based navigation system

Teaching and learning methods

- Interactive lectures
- Tutorials in presence with lab equipment
- Self-study with exercises and assignments

Literature

P. Corke, "Robotics, Vision and Control". Springer Cham, 2nd edition (2017).

B. Siciliano, O. Khatib, "Springer Handbook of Robotics". Springer Berlin, Heidelberg (2008).

Assessment

Certification requirements

Module uses certification requirements

Certification requirements for final examinations (conditions for attestation)

The submission of two assignments (robot design projects) during the semester is required to access the final exam.

Basic principle for exams

As a rule, all standard final exams are conducted in written form. For resit exams, lecturers will communicate the exam format (written/oral) together with the exam schedule.

Standard final exam for a module and written resit exam

Kind of exam

Written exam

Duration of exam

120 minutes

Permissible aids

No aids permitted

Special case: Resit exam as oral exam

Kind of exam

Oral exam

Duration of exam

30 minutes

Permissible aids

No aids permitted
