

## Module Description, available in: EN

# Internet of Things

#### **General Information**

**Number of ECTS Credits** 

3

Module code

TSM\_loT

Valid for academic year

2024-25

Last modification

2019-08-31

Coordinator of the module

Daniele Puccinelli (SUPSI, daniele.puccinelli@supsi.ch)

Explanations regarding the language definitions for each location:

- Instruction is given in the language defined below for each location/each time the module is held.
- Documentation is available in the languages defined below. Where documents are in several languages, the percentage distribution is shown (100% = all the documentation).
- The examination is available 100% in the languages shown for each location/each time it is held.

	Lausanne			Lugano	Zurich		
Instruction				<b>X</b> E 100%			
Documentation				<b>X</b> E 100%			
Examination				<b>X</b> E 100%			

## **Module Category**

TSM Technical scientific module

# Lessons

2 lecture periods and 1 tutorial period per week

## **Entry level competences**

Prerequisites, previous knowledge

Familiarity with networking and TCP/IP

Basic knowledge in Python, HTML and JavaScript

## Brief course description of module objectives and content

This course covers all the topics related to the Internet of Things: from the sensors level to the higher layer of data rapresentation and manipulation. It is intended to give the student the technical knowledge and skills needed for building up an Internet of Things (IoT) system.

## Aims, content, methods

#### Learning objectives and competencies to be acquired

Students attending this module

- have an overview of the IoT world: the technologies, application contexts, development strategies, implementation problems, and the possible solutions
- gain familiarity with the key technologies and protocols employed at each layer of the stack
- learn how to plan and implement real-world applications that involve heterogeneous devices
- Understand where the IoT concept fits within the broader ICT industry and possible future trends
- Appreciate the role of big data, cloud computing and data analytics in a typical IoT system

## Module content with weighting of different components

#### Part 1 (25%):

- · Introduction to the Internet of Things
- Edge and gateway devices (microcontroller, sensors, and actuators)
- · Communication technologies
- · Communication protocols

# Part 2 (30%):

- Embedded programming (Arduino, RaspberryPi)
- · Deploy an IoT infrastructure

#### Part 3 (30%):

- Heterogeneous IoT devices integration
- · Data acquisition, management, and mining
- · IoT in the real world

#### Part 4 (15%):

· Connect the IoT infrastructure with the data world

#### Teaching and learning methods

Lecture and practical work on computer and dedicated hardware

Literature

## **Assessment**

## **Certification requirements**

Module does not use certification requirements

## Basic principle for exams

As a rule, all standard final exams are conducted in written form. For resit exams, lecturers will communicate the exam format (written/oral) together with the exam schedule.

## Standard final exam for a module and written resit exam

Kind of exam

Written exam

**Duration of exam** 

120 minutes

Permissible aids

Aids permitted as specified below:

Permissible electronic aids

No electronic aids permitted

Other permissible aids

Slides and lecture notes in addition to recommended book chapters

Special case: Resit exam as oral exam

Kind of exam

Oral exam

**Duration of exam** 

30 minutes

Permissible aids

No aids permitted
