

**Module Description, available in: EN**

## Wireless Communications

**General Information****Number of ECTS Credits**

3

**Module code**

TSM\_WireCom

**Valid for academic year**

2022-2023

**Last modification**

2021-12-22

**Coordinator of the module**

Luciano Saperi (ZHAW, sarp@zhaw.ch)

**Explanations regarding the language definitions for each location:**

- Instruction is given in the language defined below for each location/each time the module is held.
- Documentation is available in the languages defined below. Where documents are in several languages, the percentage distribution is shown (100% = all the documentation).
- The examination is available 100% in the languages shown for each location/each time it is held.

	Lausanne			Lugano	Zurich		
<b>Instruction</b>					X E 100%		
<b>Documentation</b>					X E 100%		
<b>Examination</b>					X E 100%		

**Module Category**

TSM Technical scientific module

**Lessons**

2 lecture periods and 1 tutorial period per week

**Entry level competences****Prerequisites, previous knowledge**

The students are expected to have knowledge on the basic modulation schemes including amplitude, frequency and phase.

They must also have studied the fundamentals of coding techniques. Other required competences that may be acquired through personal work are statistics, probabilities, wave theory, Fourier analysis and the OSI reference model.

**Brief course description of module objectives and content**

The module starts with the basics of the Physical and Data Link layers of advanced wireless systems.

Then the students will be exposed to the definition or functioning of a selection of the most important wireless standards at the present time. The focus will be on the physical layer and the medium-access layer.

Exercises will be used throughout the course to exemplify the use and application of the learnt material to compare the existing standards for a given problem in the context of the merits and limitations of each technology.

## Aims, content, methods

### Learning objectives and acquired competencies

The student will be able to

- discriminate between the various advanced modulation, coding and transmission concepts and explain their benefits and limitations
- explain the key characteristics of a selection of the most important wireless standards at the present time in regards to the Physical and Data Link layers
- find specific information in the standardisation documents

select the most suitable wireless technology for a practical problem.

### Contents of module with emphasis on teaching content

#### Common Fundamentals (25%)

Applications, requirements, market and frequency spectrum issues in wireless communications. Wireless receivers and transmitters. Digital modulation and coding. Radio propagation.

#### Standards(75%)

Introduction to a selection of the most important standards at the time of the course (the actual technologies taught may differ somewhat from this list) :

- GSM / UMTS / LTE / 5G
- GNSS (GPS, Galileo)
- WLAN / Bluetooth
- RFID
- DAB

etc.

### Teaching and learning methods

- Lectures
- Work through exercises or perform simulations under supervision
- Self-study:
  - completion of exercises
  - research using the standards documents, online and library resources
  - Analysis of case studies

### Literature

- Ke-Lin Du, M.N.S. Swamy, „Wireless Communication Systems“, Cambridge, 2010
- M. Sauter, „From GSM to LTE“, Wiley, 2011
- Mobile & Wireless Networks and Services, Jean-Frédéric Wagen
- Digital Communications, J. Proakis, M. Salehi, McGraw-Hill Press
- Introduction to Communication Systems, F. G. Stremmler, Addison-Wesley
- Information Transmission, Modulation and Noise, M. Schwarz, McGraw-Hill
- Principles of Mobile Communication, G. Stuber, Kluwer Academic Publishers
- Introduction to Space-Time Wireless Communications, A. Paulraj, N. Nabar, D. Gore, Cambridge Press
- Mobilfunksysteme, C. Lüders, Vogel Verlag
- Grundkurs Mobile Kommunikationssysteme, M. Sauter, Wieweg Verlag
- Digitale Signalverarbeitung, D. von Grünigen, Fachbuchverlag Leipzig
- Standards, e.g. 3GPP, IEEE 802.x, ETS 300 401, ISO-IEC\_CD 18000-6C, ISO/IEC FDIS 15693-x: 2000(E),
- Klaus Finkenzeller, RFID-Handbuch, 3. Auflage, Hanser.
- WCDMA Requirements and Practical Design, (ed.) [R. Tanner](#), [J. Woodard](#), Wiley
- J. Schiller, Mobilkommunikation, Addison-Wesley.
- Digitale Fernsehtechnik in Theorie und Praxis; W. Fischer, 2006 Springer
- Digital Television; W. Fischer, 2007 Springer
- Digital Video Broadcasting; U. Reimers, 2005 Springer
- Telemetrie mit GSM/SMS und GPS Einführung, J-M Zogg, Franzis Verlag

## Assessment

### Certification requirements

Module does not use certification requirements

### Basic principle for exams

**As a rule, all the standard final exams for modules and also all resit exams are to be in written form**

### Standard final exam for a module and written resit exam

#### Kind of exam

written

#### Duration of exam

120 minutes

#### Permissible aids

*Aids permitted as specified below:*

#### Permissible electronic aids

Calculator

#### Other permissible aids

Part of the exam will be open book and there may be also a part in which no reference material is allowed.

### Special case: Resit exam as oral exam

#### Kind of exam

oral

#### Duration of exam

30 minutes

#### Permissible aids

*Aids permitted as specified below:*

#### Permissible electronic aids

Calculator.

#### Other permissible aids

No reference material will be allowed
